

Health-Care Items for Discussion  
Des Moines Meeting

1) The revised Health Care list, included as Health Care Items List for Des Moines Meeting, has been modified per our discussions during the April 21 call. There are a couple of items that I want to flag in that they were discussed with changes made but not closed. The changes made either have not been vetted at all or are still in discussion. They are:

- 12 & 12a – Bath Aids – Split per discussion, need to resolve 12a classification
- 31a – Birth Control – IUD – Added item per request, classification per research, agreement?
- 55 – Breast Pumps – Need to resolve classification
- 136 – Dental Implants – List not developed
- 138 – Tissue & Breast Expander – Need to resolve classification
- 204 – Ostomy Product – Added per request for needed detail, my classification after list was supplied – Need to resolve classifications

As in the past, all changes made since the last update have been highlighted. If you have not been participating to date, the highlighting is immaterial.

2) Results of the Survey of states as to their classification and taxability both before and after the SSUTA agreement of the items Dialysis Equipment, Enteral Feeding Systems and Oxygen Delivery Equipment.

3) Initial rough draft of a white paper on this issue. The purpose of this was more to itemize areas to discuss, including items already opened as well as items that potentially need discussion.
